Project Management Tool

Your Projects Streamlined

Project Orbit is a unique project management solution offering an efficient system designed specifically for managing engineering projects. Key features streamline your project functions, facilitate efficiencies and contractual probity, reduce risk and ensure smooth operations for your team providing access to your information anytime and anywhere through our centralised, secure document storage system.

Discover the Difference

Simplify your complex projects with secure document management, seamless communication, and built-in compliance tracking—allowing your team to be efficient, informed, and always on track.

Simple

An intuitive system designed to keep your projects on track

Flexible

Flexibility for a tailored project experience

Collaborative

Everything in one place, right when you need it

**Engineered for
your projects**

Key Features

Document Management

Our document library enhances output and efficiency with excellent data management, broad file compatibility, and efficient versioning. SharePoint integration ensures easy adoption, creating a seamless, interconnected work environment.

Non-conformance Report

This module in ProjectOrbit is an essential feature for managing and navigating contractual compliance, facilitating smooth two-way communication for overseeing and closing out non-compliance instances from a top-down view.

Transmittals

The Transmittal module enhances project efficiency and collaboration through facilitating the formal issuing of deliverables such as models, drawings, reports and documentation, improving the management, traceability, and security of data.

PowerBI

PowerBI, offers an immersive, and interactive way to explore and understand your project data. Unifying project reports and dashboards, PowerBI within ProjectOrbit allows users to access and assess project data seamlessly.

RFI

ProjectOrbit's Request for Information (RFI)/Technical Query (TQ) module offers a system that enhances communication, encourages transparency, traceability, and bolsters the project management process.

Risk Module

This module in ProjectOrbit enables you to understand and manage risks and opportunities. Achieve your objectives, timelines and budgets, and access capabilities for allocating, managing and tracking project-associated risks.

Notices

Notice modules efficiently manage formal contractual communications such as Notices to Contractor (NTC) and Notices to Engineer (NTE). Experience versatility through the sending and recording of both delivery and key contractual information.

Document Naming

A module tailored to meet your project requirements, such as naming conventions complying with the ISO 19650 framework. Ensures your documents are identifiable and traceable, drive efficiency, consistency, and clarity throughout your projects lifecycle.

Its proven **adaptability** makes it the go-to choice for engineering teams looking to **streamline** and elevate their project workflows.
